

Student Expense Calculator

Author: Jamaica Lyza T. Alba

Course: BES 10a Computer Fundamentals and Programming [2nd Sem 25-26]

Date: May 12, 2026

Description

This program calculates a student's allowance, expenses, and savings using expressions.

Concepts Used

- Variables
- Expressions
- Operators (+, -, *, /)
- Type Conversion
- Input and Output

```
In [1]: # User's basic information

name = input("Enter your name: ")
days = input("Enter number of school days: ")
daily_allowance = input("Enter your daily allowance: ")

lunch = input("Enter daily lunch expense: ")
dinner = input("Enter daily dinner expense: ")
snacks = input("Enter daily snacks expense: ")
```

```
In [2]: # Inputs (strings) into numbers

days = float(days)
daily_allowance = float(daily_allowance)

lunch = float(lunch)
dinner = float(dinner)
snacks = float(snacks)
```

```
In [3]: # Calculations using expressions

total_allowance = days * daily_allowance

daily_expenses = lunch + dinner + snacks
total_expenses = daily_expenses * days

remaining_balance = total_allowance - total_expenses
average_spending = total_expenses / days

savings_percent = (remaining_balance / total_allowance) * 100
```

In [4]: *# Results*

```
print("\n--- Expense Summary ---")
print("Name:", name)
print("Total Allowance:", total_allowance)
print("Total Expenses:", total_expenses)
print("Remaining Balance:", remaining_balance)
print("Average Daily Spending:", average_spending)
print("Savings Percentage:", savings_percent, "%")
```

```
--- Expense Summary ---
Name: Jamaica Lyza T. Alba
Total Allowance: 29250.0
Total Expenses: 24375.0
Remaining Balance: 4875.0
Average Daily Spending: 125.0
Savings Percentage: 16.666666666666664 %
```
